ABOUT ME

Software Engineer with experience building backend systems, REST APIs, and data-driven applications using Python, FastAPI, Laravel, and MySQL. Experienced in debugging, API integrations, database optimization, and building reliable production systems. Interested in backend, Python, and AI-focused engineering roles.

EDUCATION

B.E. in IT, PRMITR Badnera (8.50 CGPA)

2020 - 2024

SKILLS

Languages: Python, PHP, JavaScript, SQL, HTML, CSS
Backend: FastAPI, Laravel, REST APIs, Authentication, Authorization, API Integration
Databases: MySQL, PostgreSQL, Database Design, Query Optimization, Data Validation
DevOps: AWS, Docker, Linux, Nginx, Kubernetes (Basics), Deployment
Engineering: OOP, SOLID, Design Patterns, Debugging, Testing, Caching, SDLC
Tools: Git, GitHub, Postman, VS Code, PHPStorm

PROFESSIONAL EXPERIENCE

Incoweb Technologies

Mar 2026 – Present

Backend Developer

- Built backend services and REST APIs using **Laravel, PHP, MySQL, and Redis** for business automation applications.
- Integrated **WhatsApp Business APIs and third-party services** for automated messaging, lead management, notifications, and workflows.
- Designed database schemas and optimized **MySQL queries and Eloquent relationships** for performance and data reliability.
- Implemented **authentication, authorization, validation, and role-based access control** using reusable Laravel services and middleware.
- Debugged and resolved API, database, and third-party integration issues from development through deployment.

Wipro Limited

Dec 2024 – Mar 2026

Associate

- Analyzed mapping and data-processing systems, identifying and reporting **250+ system anomalies and data discrepancies**.
- Processed and validated **1,000+ complex datasets** for an autonomous vehicle project before AI model ingestion.
- Used Deepen.AI and internal tools to analyze object-recognition outputs and identify data-quality issues.
- Collaborated with engineering teams to investigate issues, validate fixes, and improve data quality and reliability.

PROJECTS

Sentinel – Website Security Audit Platform

July 2026

- Built a security auditing platform using **Laravel, Livewire, FastAPI, Python, and MySQL** to identify vulnerabilities in web applications.

- Designed REST API communication between Laravel and a stateless Python scanning engine for automated security analysis.
- Implemented security checks for **TLS, security headers, exposed files, cookies, CORS, malware, and information leakage**.
- Built a CLI for source-code analysis, dependency scanning, secret detection, and Git history security audits with report synchronization.
- Designed scan processing and reporting with isolated checks, validation, and secure handling of sensitive evidence.
- [GitHub Repository](#)

Laravel CRM System

June 2026

- Built a CRM using **Laravel, Livewire, MySQL, and Blade** with customer, lead, and role-based access management.
- Developed REST APIs and backend services following Laravel MVC architecture.
- Optimized database queries and Eloquent relationships for efficient data access.
- Implemented authentication, authorization, validation, and secure data handling.
- [GitHub Repository](#)

Visual Alertness Monitoring System

September 2023 – January 2024

- Built a Flask-based computer vision application for real-time driver drowsiness detection using **Python, OpenCV, Dlib, and Mediapipe**.
- Implemented facial landmark and eye-movement analysis to identify signs of driver fatigue.
- Designed the application to process webcam video and provide real-time alertness feedback.
- [GitHub Repository](#)

CERTIFICATES

- | | |
|---|--------------|
| • PHP and MySQL | October 2023 |
| • Introduction to Cybersecurity | May 2023 |
| • CyberOps Associate | July 2023 |
| • Introduction to Packet Tracer | May 2023 |

ACHIEVEMENTS

- AGBA National Talent Hunt Scholarship Award.
Supported by Ministry of Electronics and Information Technology
Government of India. ([Link](#))
