ABOUT ME

Software Engineer with hands-on experience building backend systems, REST APIs, and data-driven applications using Python, Laravel, FastAPI, and MySQL. At Wipro, I worked on analyzing large datasets, identifying system issues, and collaborating with engineering teams to improve data quality and reliability. I have also built projects that connect Laravel applications with Python services, including real-time analysis and security-focused systems. I enjoy understanding how systems work, solving practical technical problems, and turning requirements into reliable solutions. I'm particularly interested in roles where I can work closely with teams and customers to solve real-world problems and take solutions from development to deployment.

EDUCATION

B.E. in IT, PRMITR Badnera (8.50 CGPA)

2020 - 2024

SKILLS

Languages:	Python, PHP, JavaScript, SQL, HTML, CSS
Backend & APIs:	Laravel, FastAPI, REST APIs, Authentication & Authorization, API Integration, JSON
Databases:	MySQL, PostgreSQL, Database Design, Query Optimisation, Data Validation
DevOps & Infrastructure:	Docker, Linux, Nginx, Kubernetes (Basics), Deployment Fundamentals
Engineering:	OOPs, SOLID Principles, Design Patterns, SDLC, Caching, Debugging, System Integration, Security Best Practices
Tools:	Git, GitHub, Postman, VS Code

PROFESSIONAL EXPERIENCE

Wipro Limited

Dec 2024 – Mar 2026

Associate

- Analysed mapping and data-processing systems, identifying and reporting **250+ system anomalies and data discrepancies**.
- Collaborated with engineering teams to investigate issues and validate fixes, contributing to a **15% improvement in map data accuracy and reliability**.
- Processed and validated **1,000+ complex datasets** for a self-driving vehicle project, ensuring data quality before AI model ingestion.
- Used Deepen.AI and internal tools to analyse object-recognition outputs and identify data-quality issues, contributing to a **10% improvement in AI model performance metrics**.

Incoweb Technologies

Mar 2026 – Present

Backend Developer

- Developed backend services and RESTful APIs using **Laravel, PHP, MySQL, and Redis** for business automation and customer-facing applications.
- Integrated **WhatsApp Business APIs and third-party services** to automate customer communication, lead management, notifications, and business workflows.
- Designed database schemas and optimized MySQL queries and Eloquent relationships to improve application performance and data reliability.
- Implemented authentication, authorization, validation, role-based access control, and reusable Laravel services for secure and maintainable applications.

- Translated business requirements into technical solutions, troubleshooting API, database, and integration issues from development through deployment.

PROJECTS

Sentinel – Website Security Audit Platform

July 2026

- Developed a full-stack website security auditing platform using Laravel, Livewire, MySQL, FastAPI, and Python to identify security vulnerabilities in web applications.
- Built a Laravel-based authentication system with role-based access control (Admin/User), scan history, dashboards, and secure report management.
- Designed and integrated RESTful APIs between Laravel and a stateless Python scanning engine for real-time website security analysis.
- Implemented comprehensive security checks including HTTPS/TLS validation, security headers, DNS configuration, exposed files, cookie security, malware detection, CORS analysis, and information leakage detection.
- Developed a cross-platform CLI tool capable of performing offline source code analysis, dependency scanning, secret detection, and Git history security audits with automatic report synchronisation.
- Optimised backend architecture using Laravel MVC, Eloquent ORM, Livewire components, middleware, and MySQL while following secure coding best practices.
- [GitHub Repository](#)

Laravel CRM System

June 2026

- Developed a Customer Relationship Management (CRM) system using Laravel, Livewire, MySQL, and Blade.
- Implemented customer management, lead tracking, and role-based access control modules.
- Designed RESTful APIs and backend services following Laravel MVC architecture.
- Optimized database queries and relationships using Eloquent ORM.
- Built dynamic interfaces with Livewire to provide a seamless user experience.
- Implemented authentication, authorization, validation, and secure data handling.
- [GitHub Repository](#)

Visual Alertness Monitoring System

September 2023 – January 2024

- **Solution Architecture:** Designed a real-time monitoring solution to address driver safety issues, achieving a 95% accuracy rate in drowsiness detection logic.
- **Tech Stack Selection:** Selected and integrated optimal libraries (Dlib, Mediapipe) to process real-time video data efficiently within a Flask-based architecture.
- **Scalability:** Structured the backend server to handle concurrent requests, ensuring a scalable and accessible web-based solution for end-users.

CERTIFICATES

- | | |
|---|--------------|
| • PHP and MySQL | October 2023 |
| • Introduction to Cybersecurity | May 2023 |
| • CyberOps Associate | July 2023 |
| • Introduction to Packet Tracer | May 2023 |

ACHIEVEMENTS

- AGBA National Talent Hunt Scholarship Award.
Supported by Ministry of Electronics and Information Technology
Government of India. ([Link](#))
